Lake Tisza

Its total surface is 127 sq kilometres and consists of a variety of large open water surfaces and shallow water, countless dead-end channels and islands forming a characteristic so-called 'mosaic country'. Lake Tisza belongs to Hortobágy National Park, thus it is part of the UNESCO World Heritage programme since 1999.

Lake Tisza offers a choice of recreational activities as varied as its landscape. You can go hiking, swimming or enjoy water sports:

- You can enjoy beach life on any of the 6 public beaches along the shore, relax in the spas of Tiszafüred or try extreme water sports during the day then have fun in the busy nightlife in and around Abádszalók.
- As the water level ranges from deep to shallow so change the native species of fish. Fishing is allowed if all relevant rules are kept.
- The lake has an exceptional wildlife attracting nature-lovers in every season. Various trails expect you round the year to explore the secrets of the region on foot, by bike, in a boat or on horseback.

Lake Tisza Bird Reserve

It is a highly important stopping point and rest area for migrating birds when crossing Europe. A nature reserve that can be visited by guided tours only.

Lake Tisza Ecocentre in Poroszló

The new touristic complex by Lake Tisza was erected to collect and display the amazing nature and wildlife of the River Tisza valley and the second largest lake in Hungary Tisza-tó. It was opened to the public on 27th April 2012. The main building of Lake Tisza Ecocentre designed by Architect Laszlo Kertai laureate of Ybl Award symbolizes a huge landing bird. This inspiring architectural wonder offers a whole day programme with its permanent and temporary exhibitions, conference and event hall, 3D cinema, "A night in the forest" exhibition of reptiles and amphibia in terrariums, children's playroom "enchanted waterworld" or its lookout tower, as the panoramic view from its terrace in one direction to the lake and to Matra and Bukk mountains to the other is simply breathtaking.

The main building is surrounded by **a leisure park** on 7 hectares: this part of the complex is not only a Zoo with such indigenous animals like golden jackals, traditional Hungarian sheep types, storks, cormorants or pelicans but it is a kind of an amusement park with many facilities for families and kids incl. playing grounds, one of them offering an opportunity for funny rafting on wooden boats. Walking around this leisure garden you will soon find yourself in the 19 century for a while: the Poroszló local museum with its collection of rural items, a display of old fishing tools as well as a traditional poultry run will help you to imagine the rural life in Poroszló in the old times.

Within the walls of the Lake Tisza Ecocentre you can step into an amazing underwater world and marvel the region's native fish species in the largest freshwater aquarium system of Europe with a capacity of over 735,000 litres on level -1 and -2 in the main building. The inner aquariums are directly connected to an artificial lake next to the building, so they form a complex of huge freshwater system.

You will be inspired by more than 40 native Hungarian fish species, among them pikes, wels catfish or carps. It is difficult to decide, but maybe our most spectacular inhabitants are the fishes of sturgeon family: european, diamond and starry sturgeons.
